The *original* makers of wild high mountain oil of oregano, Oregamax, Juice of Oregano, and other edible herbs

## Oregacyn™ Migraine Formula P73

Oregacyn™ Migraine is a unique combination of high quality herb and spice extracts – all from the high mountain wilderness. These wild herbs and spices are researched, tested, and proven to be of the highest quality possible. Research shows that spice extracts support the natural pain-defense mechanisms. This completely edible formula from natural plants includes the proprietary P73 wild oregano blend.

The individual ingredients in Oregacyn™ Migraine Formula have been used traditionally to reduce the discomfort associated with migraines. Ayurvedic medicine has long considered holy basil to be the most sacred of plants. One of the most noted medicinal properties of holy basil is its ability to relieve the debilitating symptoms associated with migraine headaches. Holy basil, known as *Ocimum sanctum* Linn, has also been praised for its anti-inflammatory capabilities. Hypertension, one of the main symptoms associated with migraines, is also known to be alleviated by wild holy basil.

Oregacyn™ Migraine Formula P73 also contains substantial amounts of rosemary. Rosemary, for thousands of years has been known for its ability to improve the function of the mind. Ancient texts describe how extracts of rosemary stimulate the mind, enhance mood, boost studying powers, and improve memory. In fact, it is most famous as a memory aid. Yet, it was also known for combating disorders of the nerves as well as arthritis. Dr. Chevalier describes its value for improving circulation, especially to the brain. The ancient Chinese sclerologists teach that virtually all illnesses are associated with poor circulation and that improving circulation is the answer to every malady. Rosemary has an ancient history in fighting pain. It is still used for this purpose in Europe. Tierra notes that rosemary is of “great benefit in treating headaches,” because it contains natural anti-pain compounds. Refer to the following books on rosemary for further information: *Supermarket Remedies* by Dr. Cass Ingram and *A Way of Herbs* by Michael Tierra.

The final vital ingredient in the Oregacyn™ Migraine Formula P73 is the proprietary Oreganol™ P73 blend, which has been extensively researched and tested at major universities worldwide. The anti-fungal and anti-bacterial properties of Oreganol™ P73 were attested to by research performed at the Georgetown University Medical Center in Washington, D.C. (ask a North American Herb & Spice representative for a copy of the research). Oreganol™ P73 also contains extraordinarily powerful analgesic activities and remarkable anti-inflammatory properties. Researchers at Anadolu University in Turkey discovered the relationship between the analgesic activities of origanum oil and how they seem to be dependent on carvacrol content. Carvacrol, for its part, has been shown to

have prostaglandin inhibitory effects. Oregano was examined in this study against morphine in a standard tail-flick test. Analgesic (antinociceptive) activities of morphine, fenoprofen and the essential oils obtained from wild organum were measured. The results were astounding. Origanum proved to be almost as effective against pain as morphine and more effective than fenoprofen. In conclusion, organum essential oil has dose-dependent analgesic activity which seems to be based upon carvacrol content. This landmark study was the first to report analgesic action and carvacrol dependency of organum essential oil by the tail-flick method.

Overall, Oregacyn™ Migraine Formula P73 offers this unique blend of powerful, all natural spice extracts concentrated via our propriety process, which increases the efficacy of pure essential oils by turning the oil into a highly absorbable powder. Oregacyn™ Migraine Formula P73 is a powerful and effective all natural alternative to traditional migraine remedies.
