

Royal Oil

no refrigeration required

Royal Oil is the first and only fresh, stabilized royal jelly without added honey or sweeteners. Royal jelly is credited with miraculous rejuvenating and regenerating properties. It contains enzymes, phytosterols, acetylcholine, collagen and natural hormones. It is the only food for queen bees, and therefore, it is abundant in nutrients like vitamins D and E as well as niacin, riboflavin, biotin and pantothenic acid. It is also an excellent source of minerals, particularly potassium and phosphorus.

Royal jelly's known antimicrobial properties are mainly attributed to 10-hydroxy-Delta-2-decenoic acid and other fatty acids. Water soluble peptides and proteins contribute to its antibacterial and anti-fungal actions. Modern research shows royal jelly has a powerful effect upon adrenal function and, thus, helps the body combat stress and other symptoms related to weak adrenal glands. This is largely because royal jelly is the richest known source of the critical B vitamin pantothenic acid, which is essential for proper adrenal function.

For improving hormone balance and fighting fatigue, stress, nervousness or panic attacks, royal jelly is essential. Although no sweeteners are added, it has an excellent sweet taste! For an energy boost any time, take five or more drops under the tongue. Add it to smoothies, shakes, juice or warm cereals. Do not hesitate to share this unusual treat with your stressed or tired children!

Remember: see your physician first. This product is not designed to cure any conditions.
